Itergy

Readiness assessment of your email migration to the Cloud

The challenges of moving to the Cloud

You have made the right decision by joining more than 30% of companies who have migrated their email to the Cloud. A readiness assessment of your email infrastructure, however, is just as important and frequently overlooked. All too often, proposals are made without performing a detailed analysis of the client's situation.

Recognized as a top Microsoft infrastructure partner, Itergy has an all-in-one solution that addresses this need specifically. It includes:

- Do you have a regulatory obligation to keep your email on servers located in Canada?

- Can you export your anti-spam solution's filters to the Cloud?

- Have you considered a transition period with a hybrid infrastructure, where some users would have their email in the Cloud and the majority would remain on the local Exchange server?

- Do you want to make your users' lives easier by providing them a single user name and password in the Cloud and on the local network (Single Sign-On (SSO))?

These are just some of the points that should be included in a preliminary analysis before undertaking a Cloud migration. This will avoid post-migration problems such as the following:

- Losing your emails for 24 to 72 hours;

- Difficulty synchronizing email with mobile devices;

- Lost or corrupt archives;

- Increased volume of spam.

Top Features

- Bandwidth analysis
- Email server health status report
- Active Directory validation (SSO)
- User inbox analysis

Benefits

- No loss of email during migration!
- Complete synchronisation with Active Directory
- Replication of anti-spam strategies

Itergy's Solution

Itergy's expert technical team takes time to meet with you in order to define your project accurately and discuss your priorities. Our approach is based on a proven and documented process that allows us to identify potential problems during the initial analysis phase—not in the middle of the migration!

We understand how crucial your email infrastructure is to your business, which why we handle it by following the same procedure we used for our own Cloud migration!

Our solution includes the following:

- An in-person meeting on your premises with one of our experts;

- An audit (active monitoring) of your existing infrastructure;

- An in-depth analysis of your data following the audit;

- Written recommendations after project completion.

Our process

Itergy will start by assigning an email migration expert to your project. This person will meet you on your premises to fully understand your situation.

We use a high-quality software solution to audit your users' network, hardware, and tools. Afterwards, a detailed analysis of the data collected is performed and a rating is assigned to the various elements of your infrastructure, such as:

- Network: bandwidth, firewall, gateway, anti-spam;

- User tools: email inboxes, types of mobile devices, Outlook version;

- Server health report: Exchange, Active Directory;

- Legal considerations: brief summary of your industry's requirements;

- Final report: presentation and recommendations.

The final report clearly indicates the elements of your infrastructure that should be changed or adapted before the migration in order to avoid any potential problems. In addition, we recommend the solution best suited to your business needs, obligations and current infrastructure.
