Are You Safe?

The importance of making Azure AD & Active Directory (AD) work

Think about how a slight mishap, like incorrect access or an even greater crisis like a security breach or a faulty domain controller, can wreak havoc with your Azure AD or AD implementation. Consider the countless changes your company goes through in a year, which affect the users, customers, partners, IoT and other edge devices that need to access a specific system, app or platform. Controlling identities and user access are thus essential for any enterprise, and Active Directory and Azure AD are at the core of any organization's security.

An improperly maintained Azure AD or Active Directory can lead to costly operational disruptions and inefficiencies, reduced productivity, security breaches, and risk of noncompliance. Also, surprising is the amount of duplication of effort across different teams when the Joiner-Mover-Leaver (onboarding/ transfer/ offboarding) process in Active Directory is not optimized.

Active Directory (AD) is the foundation of your Windows technology infrastructure – the Microsoft passport that identifies, names, classifies, segments, permits, restricts and denies your employees' access to the people and information they need to do their jobs, every minute of every hour of every day.

It's imperative that it functions with craftsman-like precision and rock-solid security.

▶ It's time to check, modernize the doors that protect your corporate data and information.

2 SECURITY BREACHES DON'T COME CHEAP

£.M3,1

2019

The Global Cost of a **Data Breach** Is Up in 2019. In this year's study, the average cost of a data breach per compromised record was £88, and it took organizations 279 days, on average, to detect a breach.

*Average total cost of a security breach in UK according to IBM.

▶ Minimize the risk of disrupting mission-critical business applications with an Azure AD or Active Directory managed services. [Click here](#) to learn more.

Corporate Data SECURED

Compromising your organization's Active Directory is an easy way to gain access to all critical corporate data and resources. And funny enough, AD is often an area that is overlooked and underfunded.

As an IT business leader, some of your primary responsibilities are to keep the company's operations up and running, ensure that security is taken care of, and that the organization is meeting compliance laws.

Accelerate

Your Cloud
Adoption

4

The Cloud is the latest driver to optimize and modernize Active Directory, however in many enterprises, Active Directory (AD) simply isn't Cloud-ready.

Running legacy AD has become one of the MAIN obstacles in leveraging cloud-based technologies to improve business and operational efficiency. Any missteps can have disastrous consequences. Investing in your AD infrastructure is now not simply a good idea, — it's a **necessity**.

CLOUD READY

Is your Active Directory Cloud Ready? [Click here to find out.](#)

Make Azure AD and Active Directory the agile, **secure**, mature business application it was intended to be the one your enterprise needs in order to succeed in this era of business and Cloud computing.

Itergy

Managed Services

What Does Itergy's Best-In-Class
Managed Services Look Like?

A guaranteed level of
AD performance and
monitoring backed by
stringent SLAs

Guaranteed
availability with
24/7 monitoring
and resolution

Enhanced
visibility and
accountability with
in-depth Active
Directory expertise

Monitor and
manage Azure AD
and Active Directory
in over 65 countries

A photograph of two women with curly hair, wearing black long-sleeved shirts with 'AMRAN' and 'KARMA' printed on them, standing in a server room. They are both holding and looking at white tablets. To their left are several tall server racks with glass doors, showing internal components and blue lighting. The room has a modern, clean aesthetic with wooden doors and a patterned carpet in the background.
