Simplifying IT So You Can Focus On Your Business

Rio Tinto

CASE STUDY

Fast Facts

- Public company, founded in 1873
- Over 45,000 employees

Industry

- Mining & Metals manufacturer

Challenges

- Finding a directory services management solution capable of meeting Rio Tinto's rigorous service level agreements at a reasonable cost.

Solutions

- Leverage Itery's in-depth understanding of Microsoft Active Directory and Identity Management to provide Rio Tinto with a Directory management solution of greater value.

With Itery, Rio Tinto now has improved operational performance and enhanced security. Not to mention reduced complexity, decreased operational costs, and a more streamlined and efficient IT environment worldwide

Client Background

Rio Tinto is one of the leading mining and exploration companies and the world's largest producers of a range of essential materials. Their sites range from capital cities to some of the most remote parts of the world.

Business Challenge

In 2003, Rio Tinto was challenged to improve the stability and security of Microsoft® Active Directory® (AD) globally. External AD knowledge and technical expertise were required to achieve this goal.

Solution

Itery had a solid reputation in this niche market and was chosen to assist Rio Tinto in defining their AD needs and to develop the necessary metrics to minimize the risk of operational disruptions. Itery developed an Active Directory managed service based upon service levels and began supporting AD in "project mode".

CASE STUDY

The Iteryg Active Directory Managed Service (ADMS) evolved to the present-day service; with worldwide coverage, built upon service level agreements and providing 24/7 expert support. Proactive management of Rio Tinto's AD and Identity Management infrastructure has resulted in a more stable, consistent and secure platform. Because of the scalability of the solution, Iteryg has also been able to efficiently deliver several large integration and divestment projects.

Iteryg supported the integration of Alcan into Rio Tinto and has also been responsible for developing the architecture and delivering on the integration of other key security technologies. In January 2011, Rio Tinto renewed their contract with Iteryg. Iteryg will continue to be responsible for managing and evolving Rio Tinto's worldwide Active Directory environment on a 24/7 basis

Conclusion

Rio Tinto has improved operational performance and enhanced security. In addition, Iteryg has reduced complexity, decreased operational costs, and has built a more streamlined and efficient IT environment worldwide.

Prior to 2005, Rio Tinto had experienced several outages. Working with Rio Tinto, Iteryg helped improve the architecture and design of AD and implemented more stringent security and management standards. This Active Directory managed service has reduced the risk of operational disruption and optimized Rio Tinto's AD performance. It has also resulted in a more consistent and secure model.

Today's security issues require organizations to manage users more efficiently and accurately while granting them access to network resources.

With support from Iteryg, Rio Tinto has been able to develop a consistent and effective identity and access strategy. By utilizing ITIL-based management methods, Iteryg provides a solution that regularly monitors the state of AD and proactively identifies potential threats. It also integrates with Rio Tinto's ITIL-based Service Model.

Key Benefits

- Enhanced security
- Improved AD reliability
- Reduced costs
- Increased employee productivity
- A more consistent AD
- Better compliance
- Worldwide coverage

About Iteryg

Established in 2001, Iteryg provides best of breed managed and professional services for Microsoft infrastructure technologies. Iteryg manages client domain controllers in 65 countries on 6 continents
